To whom it may concern:

The Elkor WattsOn-Mark II meters and mA output Current Transformers may accept a continual 20% input overload and maintain the stated accuracy.

The WattsOn-Mark II meters may accept a temporary 100% input without physical damage.

Current Transformers should not be overloaded more than 20% for a continued length of time to avoid damage.

Best Regards,

A handwritten signature in black ink that reads "Paul Korzycki". The script is cursive and fluid, with the first name "Paul" and last name "Korzycki" clearly legible.
